## LONG DAYS, SHORT NIGHTS....

How many hours a day are you putting in? Hopefully the first sunburn is out of the way, and most of your busy season "startup" issues are behind you for the year. Now it's productivity that makes or breaks us! We hope you got something useful out of the last newsletter that will help you keep your down time to a minimum. We're seeing some equipment come in that could have lived to see another day if just the oil level was checked on occasion.

### Noteworthy news.....

- **Custom equipment or customizing of yours:** Some examples are a 480 volt 26 Gal./Min. 500 PSI water blaster, a cold water pressure washer trailer with 185 gal. of water on board (electric start, bypass water sent to the tank for extended life of the pump, stainless steel hose reels), all stainless diesel engine powered hot water pressure washer mounted inside a box van with all necessary venting for use with doors closed, jetter systems for your existing pressure washer or complete stand alone systems. We've got the experience to turn your ideas into working equipment!
- **Change in hours of operation:** Busy season means we're now open on Saturdays, (from 8:00am- 2pm), expect this to last well into fall.

**Clarke Boost:** The new and innovative scrubber that is taking the industry by storm! BOOST™, Battery Operated Orbital Scrubbing Technology, is a specially-engineered hybrid, that merges the best of scrubbing technology and high-speed orbital technology used in many of today's Clarke sanding products. The high speed of 2,250 RPM, 1/4 inch orbits that provide maximum scrubbing agitation IS the secret that provides savings in water and chemical usage, savings in floor pad usage, less dump and fill labor, and 25% longer battery running time while also cleaning the floor better than conventional disc scrubbers. **Now Available in a Rider.**

## WHAT EFFECT DOES HEAT HAVE ON YOUR EQUIPMENT?

We're talking about ambient temperature here. When the air outside is hot its hard on more than just our bodies! Making sure the equipment is maintained can prevent most problems if measures are taken to limit the exposure to super heated air. Items to keep in mind:

- Cooling fins are clean
- Oil at the proper level and in good shape.
- Air screens are clean
- Heat shields are in place and in good shape.
- If water is left in paint sprayers after cleanup, the water can evaporate out completely in just a couple of

days leading to stuck inlet or outlet valves. To avoid super heated air around your equipment, NEVER cover it with tarp, boxes, or any other material that may prevent air flow. Also never run your equipment in confined spaces such as closets. Watch these and you should be fine.

## WHAT'S YOUR PLEASURE?

A view from the top? Douglas county sure has plenty of these opportunities! One of my favorites is this view from the Callahan's looking over Roseburg and

surrounding areas. It is accessible by car, though if you choose to explore beyond where the pavement ends the going can get really tough. From Roseburg, head out Garden Valley Blvd. to Melrose road. Follow Melrose road to Doerner road, Doerner to Callahan road, and Callahan road to the top of the hill! The drive from Roseburg shouldn't take more than a half hour tops. If you're into wine, after coming down off the hill there are numerous wineries in the area with tasting rooms!

-Tim-

### Apple Bread Pudding

- One loaf French bread
- 8 eggs
- 2 cups milk
- 2 cans apple fruit filling
- 1 cup raisins
- 1 tsp. cinnamon
- ½ tsp nutmeg
- ¼ tsp cloves
- 1 cup brown sugar
- 1 stick butter

Break bread into bite size pieces and put into bowl, mix milk & eggs together, pour over bread and let sit for about an hour, add fruit and mix into bread mixture. Mix brown sugar, cinnamon, nutmeg & cloves together, then cut in the butter. Put mixture on top of bread mixture and cook at 350° for about 30-45 minutes. Let cool and eat!
